Java

Case study –5

Patient Health Checker

1 code

```java
import java.util.Scanner;

class Patient {  2 usages  new *

    int patientId;  2 usages
    String name;  2 usages
    int age;  2 usages
    double temperature;  3 usages

    void checkFever() {  1 usage  new *

        if (temperature > 100.4) {
            System.out.println("Fever");
        } else {
            System.out.println("Normal");
        }
    }

    void displayPatient() {  1 usage  new *
        System.out.println("Patient ID: " + patientId);
        System.out.println("Name: " + name);
        System.out.println("Age: " + age);
        System.out.println("Temperature: " + temperature);
    }
}
```

```java
public class casestudy6 {  Dinesh *

    public static void main(String[] args) {  new *

        Scanner sc = new Scanner(System.in);

        Patient p = new Patient();

        System.out.print("Enter Patient ID: ");
        p.patientId = sc.nextInt();

        sc.nextLine();

        System.out.print("Enter Name: ");
        p.name = sc.nextLine();

        System.out.print("Enter Age: ");
        p.age = sc.nextInt();

        System.out.print("Enter Temperature: ");
        p.temperature = sc.nextDouble();

        p.displayPatient();
        p.checkFever();
    }
}
```

2 output

```
Enter Patient ID: 101
Enter Name: Dinesh
Enter Age: 20
Enter Temperature: 98
Patient ID: 101
Name: Dinesh
Age: 20
Temperature: 98.0
Normal

Process finished with exit code 0
